

SIM LAB

INSTRUCTION MANUAL

YOKE DECK
VERSION 1.0
Last updated: 10-10-2024

BEFORE YOU START:

Thank you for purchasing this Sim-Lab product! On the following pages, you will find detailed instructions on assembly. This requires only a set of simple tools and some of your time. Please check the bill of materials before starting (page 6) and make sure all the parts are delivered.

We decided to offer a more complete range products, to compliment your cockpit with the flight sim hardware of your choice. Well known products are compatible, please review the compatibility page (5) for more information.

In some cases, the yoke can also be hard mounted below the yoke deck, instead of on top of it. Not all yokes have the capability to be hard mounted, and rely on desk clamps. To be able to meet the minimum desk thickness, we included 2 nylon desk clamp pucks to fit between your desk clamp and the bottom of the yoke deck. This way, you can still use your existing hardware without any issue.

A small selection of hardware has been provided to get you up in the virtual air quickly!

Inserting Slot-Nuts:

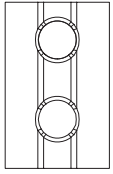

You got excited, finished the build, put the caps on, but forgot to install one element. Do not worry. It happens to everyone. In this diagram, you can see how to insert a Slot-Nut directly into the slot from the side. You can also use one of your smaller Hex wrenches to help wiggle the Slot-Nut in place.

Tools needed:

Slot-Nut M6

4X

Logitech/Saitek Pro Flight Cessna Yoke System

Thrustmaster TCS Yoke

Logitech/Saitek Pro Flight Cessna Yoke System (hanging)

Turtle Beach VelocityOne Flight

YOKE DECK HARDWARE KIT
